- 2. Certification in Microsoft products such as SQL Server, Visual Basic 6.0, ASP and System Architecture and Design.
- 3. Experience developing in the .NET environment utilizing .NET development tools.
- 4. Knowledge of non-Windows web environments, including UNIX, Linux and Apache.
- 5. Experience developing in a three-tier architecture.
- 6. Experience using middleware products, such as IBM's MQ series.

**UNION MEMBERSHIP:** Positions in this classification are represented by Local 17, Professional and Technical Unit.

**CLASS CODE: 440100**

**ISA II/23**  
**Supplemental Questionnaire**  
**Information and Telecommunications Division**  
**Job Announcement No.: 02PH2782**

Please provide a concise written response to the following questions. You will be evaluated on your level and extent of experience, level of technical knowledge and clarity of response. Your response should be limited to no more than 2 pages. Please include your name and job number at the top of each page.

1. Describe your experience and process in obtaining requirements for a new application. What are the steps you have taken and the documents produced to be able to build a project plan and estimate the project.
2. Define what you see are the essential phases of an application development project, from a stated idea by a client to the successful implementation and maintenance of the application.
3. Describe your background and experience in developing applications. Include a description of your experience with e-commerce applications. . What roles did you play in the project? How critical was the application. Were there various levels of user security defined within the application? What database was used? What interfaces were required with other applications. What was the development length and cost of development? How many users were anticipated? Was the application an Intranet or Internet application? How many were on the development team.
4. Describe in detail your experience with Web application development tools and environments.
5. Describe in detail your experience with relational databases. Which databases have you used. Have you written stored procedures and triggers? Have you define tables and defined relationships between tables.
6. Describe your experience using a middle ware integration product such as IBM's MQ series product.
7. Describe the server environments that you have both developed on and deployed to. What has been your role in these environments?
8. Describe your experience developing client server and desktop applications. What development tools have you used, how many years of experience, how large have the applications been and how large or an audience base.
9. Describe what data access objects you have used, from which application languages to which databases.
10. Describe your experience as a technical lead or supervisor of a technology group.
